

MobileIron: The foundation for mobile-centric, zero trust enterprise security

Build trust in a zero trust world

Mobile and cloud technologies have driven a dramatic change in organizations across the globe. Today, mobile users access multiple endpoints, apps, networks, clouds, and operating systems across the perimeter-less enterprise. As a result, enterprise IT organizations need a new approach to securing company apps and data wherever users work, and without sacrificing productivity.

What's needed is an enterprise environment built on **"zero trust"** — that is, one that assumes that bad actors are already in the network and secure access is determined by an **"always verify, never trust"** approach.

Only unified endpoint management (UEM) can deliver the mobile-centric, zero trust security needed to protect and secure data across the perimeter-less enterprise.

Security challenges in a mobile-centric world

We live in a world where the devices and services that employees use for work are inherently untrustworthy. This means IT needs to adopt a security model that treats all devices and networks as if they're compromised and potentially hostile.

One of the top concerns of CIOs and CISOs is the need to ensure company data is protected and users are in compliance with company security policies and local regulations.

Furthermore, insight into security threats and vulnerabilities is critical as the mainstream adoption of cloud and new devices—especially those used for both business and personal purposes—have introduced more threats than ever before.

This means IT security leaders need mobile-centric, zero trust security solutions that can help them protect their data wherever it travels beyond the perimeter-less enterprise.

MobileIron supports a zero trust approach to mobile security

MobileIron provides a comprehensive security foundation that supports a perimeter-less, mobile-centric, zero trust enterprise. MobileIron's standards-based security for cloud services, along with detection and remediation of cyberattacks at the device, network, and application levels enable organizations to fully embrace the benefits of mobile and cloud computing.

Key capabilities include:

- Policy configuration and enforcement
- Enterprise application distribution and management
- Access control and multi-factor authentication (MFA) with MobileIron Access
- Threat detection and remediation with MobileIron Threat Defense

MobileIron UEM is the platform of choice for the most security-conscious organizations in the world. Only MobileIron provides the level of visibility and deep inspection needed to identify and prevent data loss through users, devices, applications, and networks. MobileIron's flexible, cross-stack architecture and best-of-breed ecosystem give you the freedom to deploy UEM alongside other solutions that support your critical business operations.

Grow your business safely and securely with mobile and cloud

Employees play a much more influential role in technology adoption within organizations today, so MobileIron has designed our UEM platform with both IT and users in mind. We have made every effort to balance the unique needs of administrators while preserving the experience that users have grown accustomed to.

Organizational and user control

MobileIron allows organizations to implement individualized mobility and security strategies to meet their business needs at their own pace. We also ensure the privacy of users' personal data while protecting corporate data—giving users and administrators alike control over their information.

Freedom of choice

MobileIron UEM is OS- and device-agnostic. Administrators can choose cloud or on-premises deployment models and employees can use their favorite devices for work.

Experience-driven adoption

MobileIron helps IT drive adoption by supporting a native user experience across productivity apps at work. Consequentially, user adoption and compliance are improved, and security threats and shadow IT are greatly reduced, resulting in accelerated productivity and growth within the organization.

Secure business resiliency

Our platform prevents business interruption without being intrusive to the user. Invisible and automated policy enforcement ensures security compliance while allowing your business to forge ahead.
